	Nathan M. Nutter	1711
The MAILING DATE of this communication apperation apperation apperation allowable, PROSECUTION ON THE MERITS IS herewith (or previously mailed), a Notice of Allowance (PTOL-85) NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RI of the Office or upon petition by the applicant. See 37 CFR 1.313 1. This communication is responsive to 18 July 2005.	(OR REMAINS) CLOSED in this a or other appropriate communication. GHTS. This application is subject	application. If not included on will be mailed in due course. THIS
2. X The allowed claim(s) is/are <u>1-7 and 13-36</u> .		
3.		
 Attachment(s) 1. ☑ Notice of References Cited (PTO-892) 2. ☐ Notice of Draftperson's Patent Drawing Review (PTO-948) 3. ☑ Information Disclosure Statements (PTO-1449 or PTO/SB/0 Paper No./Mail Date 4 IDS 4. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material 	6. ☑ Interview Summa Paper No./Mail D 8), 7. ☐ Examiner's Amen	Date <u>0705</u> .

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: No prior art has been found that either teaches or suggests the production of a composite material having a water-insoluble matrix material comprising a crosslinked polymer, and watersoluble particles dispersed in the water-insoluble matrix material, the particles having the solubility as recited in broad claims 1 and 5, and wherein the water-soluble particles have an outer shell formed on at least a portion of the outer surface of the particle by a coupling agent having either an amino group, an epoxy group or an isocyanate group, as recited and claimed herein. Though coupling agents are known for particles such as those embraced by the references to Molnar (US 6,390,890) and Mevissen (US 5,250,085), those particles are employed as abrasives, are not water-soluble, and the coupling agents "demonstrate improvement in the qualities of increased cut, decreased wear, increased smear-resistance, and resistance to loss of abrasive grains under enduse condition," as shown in Mevissen at the paragraph bridging column 1 to column 2. The concept of the coupling agents possessing the instantly claimed functional groups employed with water-soluble particles prior to embedding in a matrix is not shown by the teachings of the prior art, and would not be obvious to use since polishing pads employ insoluble compositions. Since there are no other outstanding issues with regard to the clarity or enablement of the claims, these claims are deemed to contain allowable subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nathan M. Nutter whose telephone number is 571-272-1076. The examiner can normally be reached on 9:30 a.m.-6:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James J. Seidleck can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic
